Web Page Maker

Web Page Maker is an HTML editor with a graphics interface, which allows creating web pages without knowing HTML syntax. Different objects (text, images, links, buttons/etc) can be placed on the work area with a few mouse clicks and can be easily moved, deleted or have their sizes changed. The program includes templates as well.

Web Page Maker is closed source software and is being sold by Web Page Maker Software Inc.

It is an easy to use web design tool, which allows you to create professional Internet pages in minutes, without having any idea of HTML. The user interface allows for drag & drop of different objects and their free positioning over the work area. The program comes with several included page samples, which can be changed to the user's tastes.
